Submitted on 29 Nov 2021

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

ELIPSS : Longitudinal Study by Internet for the Social Sciences

- → Probability-based online panel
- → Monthly questionnaires designed by researchers
- → Device and internet access provided to panel member
- → Around 2400 panel members in June 2019

Panel ELIPSS, bonjour

- → Methodological corpus to standardize processes
- → Different layers of processes over the years
- → Recording of every interactions and/or actions
- → Incident ticket tracking and follow up calls

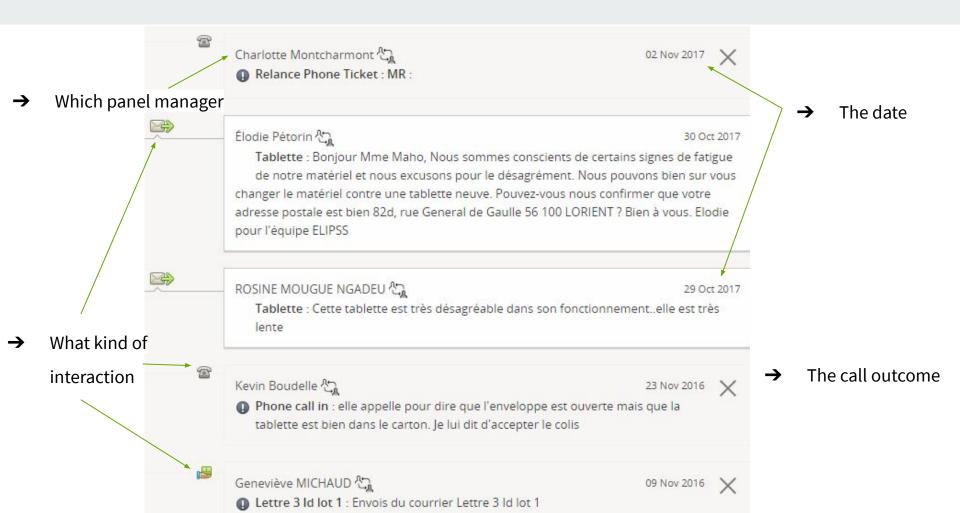

Panel management system

- → In-house tool
- → ELIPSS

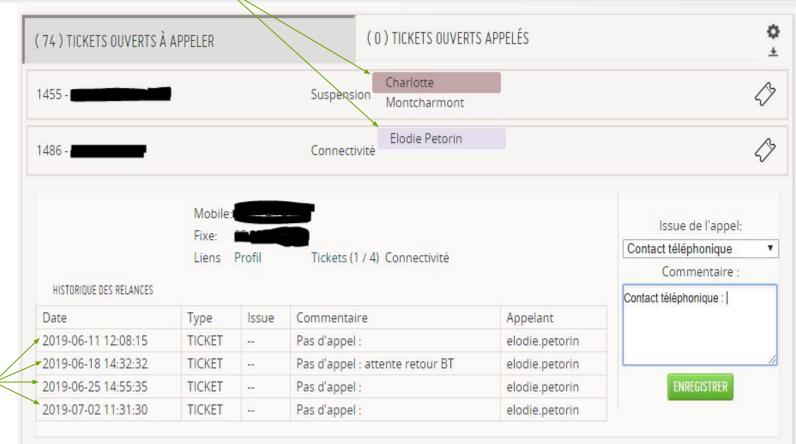

identification

- → Contact information
- → Passwordmodification

- Incident reason
- Resolution Step
- Contact type
- Interaction abstract

lours d'absences	23
ours u abserres	23

- → Absence period
- → Acceptance date
- → Unavailability reason
- → How many days in the panel lifetime

as of March 2019

- → 76 surveys
- → 3 556 panelists (2400 still active)
- → 25 000 phone calls
- → 510 000 messages (sms, in app, push)
- → 5 800 tickets
- → 4 500 follow up letters
- → 6 million survey paradata records

— Panel management: what impact on response behaviour

Our intuition: resources allocated for panel management have a large impact on response rate and panel attrition.

Stakes:

- → Review the practices + tools developed for each need
- → Cleanse our large / old database tables
- → Publish an exploitable dataset
- → Eventually learn from our design choices

Interaction traces as a dataset

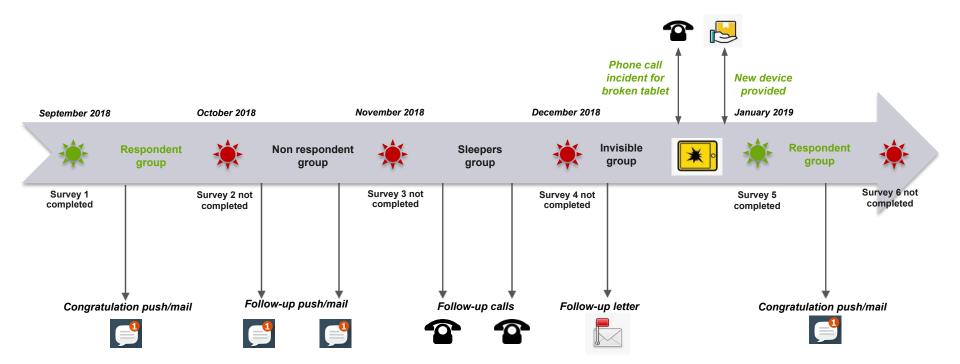

Our choice: produce two distinct atomic timelines:

- → The set of events between a panelist and the panel management system
- → The set of events between a panelist and the surveys

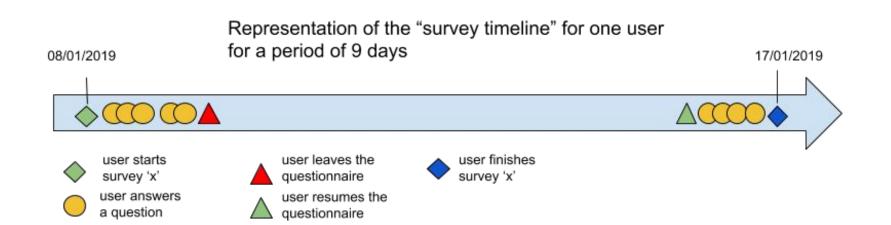

Event types

- → 'Easy' to build: follow-ups, incidents, phone call motive, survey interactions...
- → Hard to build: messages → laborious parsing

Panelist timeline

From raw to derived traces

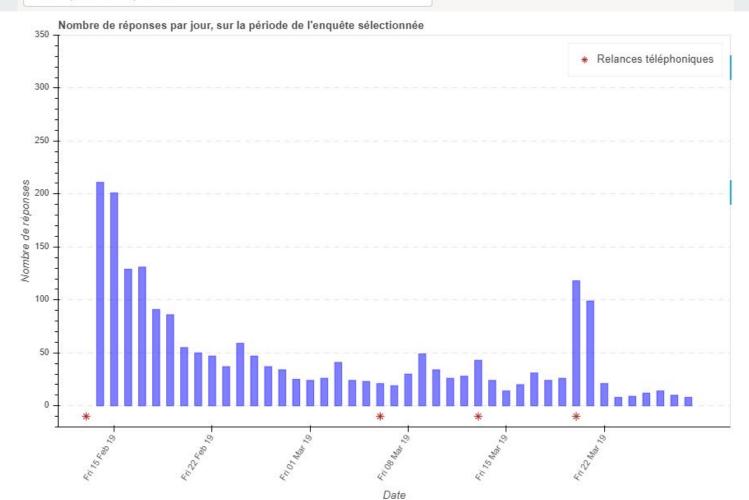

Combined together, enhanced with panelist demographics, raw data become meaningful

Questions:

- → What parameters influence response rates/behaviors and how?
- → Can we identify standard profiles that inform us on response behavior?
- → Do we have more leverage on certain group of people?

Enquête

.

Work in progress

Regarding the publication of the dataset:

- → Establishing which interactions to keep √
- ightarrow Building a dataset based on the interactions corpus $\sqrt{}$
- → Documentation ×
- ➔ Integrating panelists socio-demographic data X

Lessons learned

→ On general strategies

- More A/B testing throughout the panel lifespan
- → On a development/database perspective
 - ♦ change of people + change of practices → inhomogeneous data
- → On in-app tools improvements
 - Incident ticket tracking → missing information about the panelist contact mode

Thank you!
